

Outdoor Ceiling Mount PTZ Dome Camera

Designed to handle outdoor drop ceiling mount applications, the V1740/C environmental drop ceiling PTZ dome camera is ideally suited for parking lots, garages, filling stations and similar installations. The V1740/C has Anti-ice/anti-mist, built-in heater and air circulatory system included.

Numerous PTZ protocols are incorporated to provide compatibility with control site equipment from most manufacturers.

For low light conditions, the V1740/C provides digital signaling processing (DSP) for enhanced clarity, color and detail, and with the day/night camera option, usable images can be delivered even in extremely low light conditions. Digital slow shutter (D.S.S.), which allows a long exposure time of $\frac{1}{2}$ second, translates into a higher sensitivity and minimum illumination of just 0.03 lux (color, $\frac{1}{2}$ s). An auto flip feature rotates the camera 180° for uninterrupted viewing of any subject that passes directly beneath the dome. For additional security, a vandal resistant option is available.
